

Hello from the flow API

This page is produced by the cursor-driven ``Pdf`` builder — heading + paragraph + automatic margin handling. The next pages are emitted by the full HTML + CSS renderer via ``addHtml``.

HTML-rendered section

This portion is parsed and laid out as full HTML + CSS, with table-row layout, border-radius, generated content, and link annotations:

Section	Notes
Flow API	Cursor-driven.
HTML renderer	CSS-driven.

See the [project site](#) for full feature coverage.

Back to the flow API

After `addHtml` returns, the cursor resets to a new page.
