

# Flex Layouts

A few common arrangements that CSS Flexible Box Layout 1 makes trivial — equal-width cards, header bars with logo + actions, and vertically-centered hero strips.

## Equal-width cards (`justify-content: space-between`)

### Fast

Pure-PHP layout, no Chrome boot, no headless brows

### Spec-aligned

CSS 2.1 + selected Level-3 modules implemented to

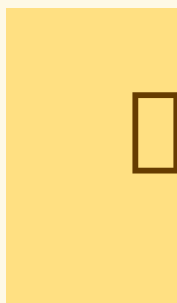

### PDF-aware

Lays out for paged media: page breaks, page boxes, named destinations.

## Header bar (logo left, actions right)

phpdfk

## Hero strip (`align-items: center`)

### Vertically centred

The art glyph and the copy block have different heights; `align-items` on the cross-axis midline.

## Column direction (`flex-direction: column`)

Items stack vertically; `align-items` applies on the horizontal cross-axis. Useful for sidebars or any vertical menu.

FAQ

## Multi-line wrap ( `flex-wrap: wrap + row-gap` )

Items overflow onto subsequent lines once the container width is exhausted. `row-gap` spaces the lines vertically; `column-gap` spaces items horizontally.
