

Callouts

Four built-in callout types — each with its own bar / background palette:

Note

A neutral aside or contextual reminder. Notes are the safe choice when you want to draw attention without alarm.

Tip

A helpful suggestion or shortcut that improves on the default approach.

Warning

Something the reader needs to know but that is not yet a hard failure. Examples: deprecation notice, potentially confusing edge case, opt-in risk that the reader can accept.

Danger

Stop and read this carefully — this content describes a hazard, data-loss risk, or other situation that absolutely must be acknowledged before continuing.

Customizing a callout

Pass a `CalloutStyle` to override the label, colours, or to hide the title row:

Body content rendered without a title row.

Heads up

The label can be replaced with any string — useful for localized docs.

Note

Bar and background colours are fully replaceable.
