

Bullet list

- Espresso — concentrated extraction under pressure
- Pour-over — slow gravity drip through a paper filter
- French press — full-immersion brew with a metal mesh
- Cold brew — long extraction in cold water, low acidity

Numbered list

1. Weigh the beans (15g for a single shot).
2. Grind to fine consistency.
3. Tamp with consistent pressure.
4. Pull the shot in roughly 25 to 30 seconds.

Customized markers

Lists accept a `ListStyle` to override indent, bullet glyphs, item spacing, and the numbering suffix:

- 1) First option
- 2) Second option
- 3) Third option

Wrapping long items

- Short item.
- A much longer item that contains enough text to overflow the available column width, causing the renderer to wrap it onto subsequent lines while keeping the bullet at the item start position and indenting the continuation lines to align with the first line of text.
- Another short item to show how the gap between items respects `ListStyle::itemSpacing`.
