

# Quarterly results

A simple table with a repeating header row, explicit column widths, and per-column alignment:

| Period  | Product | Units  | Revenue      |
|---------|---------|--------|--------------|
| Q1 2026 | Widgets | 12,340 | \$148,080.00 |
| Q2 2026 | Widgets | 14,520 | \$174,240.00 |
| Q3 2026 | Widgets | 11,890 | \$142,680.00 |
| Q4 2026 | Widgets | 17,200 | \$206,400.00 |
| Q1 2026 | Gadgets | 3,210  | \$80,250.00  |
| Q2 2026 | Gadgets | 4,140  | \$103,500.00 |
| Q3 2026 | Gadgets | 3,990  | \$99,750.00  |
| Q4 2026 | Gadgets | 5,820  | \$145,500.00 |

# Long content auto-wraps

Cells that overflow the column width wrap onto multiple lines, and the row grows to fit the tallest cell:

|                 |                                                                                                                     |
|-----------------|---------------------------------------------------------------------------------------------------------------------|
| Short           | Cells stay on a single line when they fit.                                                                          |
| Longer cell     | This cell contains enough text that it overflows the narrower column and wraps onto a second and likely third line. |
| Multi-paragraph | Explicit newlines are honoured too.<br>The second paragraph gets its own line break inside the cell.                |
