

Flex Layouts

A few common arrangements that CSS Flexible Box Layout 1 makes trivial — equal-width cards, header bars with logo + actions, and vertically-centered hero strips.

Equal-width cards (justify-content: space-between)

Fast

Pure-PHP layout, no Chromium boot, no headless browser.

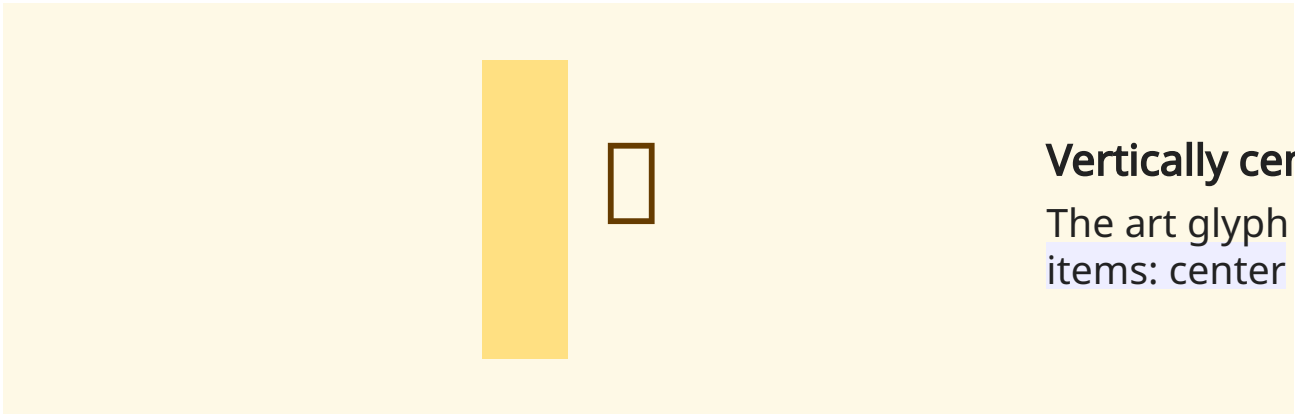

Spec-aligned

CSS 2.1 + selected Layout modules implemented

Header bar (logo left, actions right)

Hero strip (align-items: center)

Column direction (`direction: column`)

Items stack vertically; align-items applies on the horizontal cross-axis. Useful for sidebars or any vertical menu.

FAQ

Multi-line wrap (`wrap: wrap + row-gap`)

Items overflow onto subsequent lines once the container width is exhausted.
`row-gap` spaces the lines vertically; `column-gap` spaces items horizontally.
